Water Bottle Filling Trough - Double (Non-Chilled)

Product Code: MBFT-2

Two-User Wall-Mounted Bottle Filling Trough

Product Code MBFT-2

A dual-station hydration unit built for efficiency, durability, and sustainability. Perfect for busy environments where quick, convenient bottle refilling is essential.

Our two-user wall-mounted bottle filling trough provides double the capacity of the single model while maintaining the same high standards of hygiene, durability, and water efficiency. Manufactured from heavy-duty stainless steel with a low-maintenance brushed satin finish, it delivers long-lasting performance in high-demand settings such as schools, fitness centres, transport hubs, and workplace campuses.

Dual Filling Points for High-Traffic Areas

The two user stations allow simultaneous bottle refilling, reducing queues and improving flow during peak periods. Each filling point is fitted with an easy-operated on/off push-button tap, providing precise control over water usage. This manual shut-off design offers several benefits:

- Eliminates excess water run-on common with timed-flow taps.
- Conserves water and reduces utility costs.
- Minimises splashing and surface mess.
- Enhances user control and overall efficiency.

Eco-Friendly Hydration That Encourages Reuse

The rise in reusable bottle use makes dedicated refill stations more important than ever. By adding this double filling trough, your organisation actively contributes to:

- Lowering single-use plastic consumption
- Reducing landfill waste
- Supporting sustainability, ESG, and environmental policy targets
- Its design encourages positive, eco-conscious habits across your visitor and user community.

Built for Real-World Conditions

This model is designed for easy installation in a range of settings, offering:

- Wall-mounted space efficiency
- Fast-draining waste outlets
- Suitability for indoor or sheltered outdoor areas
- Adjustable installation heights to meet accessibility requirements
- The dual-station setup is a practical solution for locations with high footfall, offering twice the capacity without taking up additional floor space.
- To ensure the proper functioning and longevity of this unit, a Y-strainer or filter must be installed as part of the water supply system. The Y-strainer / filter is essential for protecting the internal components and maintaining the correct flow characteristics of the tap. Failure to install a Y-strainer or filter will result in the warranty being void.

Durable, Reliable, and Low Maintenance

Manufactured from corrosion-resistant materials, this trough ensures hygienic operation and long-term reliability. The simple, open design makes cleaning quick and straightforward, even in demanding environments.

Complete Your Hydration Network

If you require different configurations, we also provide:

Single User Bottle Filling Trough.
Triple User Bottle Filling Troughs.

Size

- 275mm in length.
- 243mm front to back.
- 445mm high.
